

BANKS AND CREDIT UNIONS

OUR SECURITY SOLUTIONS

Access control solutions keep employees and inventory safer by limiting and monitoring authorized access to areas inside your bank. Allow employee access to specific areas by setting varying levels of security clearance depending on individual employees' needs and authorization.

Ensure safety in the facility while protecting your assets with a commercial **video surveillance system**. A video surveillance system involves strategic placement of security cameras, monitoring motion and activity, generating alerts, transmitting footage, and storing that footage. Video surveillance systems can be tailored to your requirements with many cameras and configurations available.

Intrusion systems detect the entry of an intruder into a building by detecting when a door or window has been opened or the presence/movement of people. You can even detect glass breakage of windows and doors. Intrusion components include control panels, keypads, sensors, alarm and sounding devices.

Touchless security screening for weapons and explosives is a groundbreaking advancement in physical security at key entrance points for all buildings and events. The technology used revolutionizes the way we approach security, providing unparalleled safety without sacrificing convenience or efficiency.

LINSTAR Security is a security system integrator for the financial industry. Whether you require access control, video surveillance, security screening, or other security solutions, we have you covered.
