

LAW ENFORCEMENT SECURITY

LINSTAR Security collaborates with police and sheriff departments to solve identity card and security issues.

Access Control

Access control solutions keep employees and guests safer by limiting and monitoring authorized access to rooms and areas. Allow employee access to specific areas in your police department by setting varying levels of security clearance depending on individual employees' needs and authorization.

Intrusion Detection

Intrusion alarm is a standalone or integrated component of commercial security systems. Intrusion components include control panels, keypads, sensors, alarm and sounding devices.

Video Surveillance

Ensure safety in the department building while protecting your assets and staff with a commercial video surveillance system. Day or night, the use of surveillance cameras are a proven deterrent and help you capture and track activity.

Alarm Monitoring

Remote security and alarm system monitoring services for your department. As an add-on to your commercial security system, services may include automated alerts of intrusion, alarm, and more.

LAW ENFORCEMENT

EVIDENCE RECORDING & MANAGEMENT

With body-worn cameras from LINSTAR Security, law enforcement agencies are able to record and keep record of first-person point of view (POV) video, still images and audio. Police body cameras are proven to increase officer safety and reduce department liability with decreased use of force incidents and reduced false complaints by citizens.

Police body cameras from LINSTAR Security have the ability to record video, take high resolution stills, or only record audio, always providing the most appropriate evidence collecting solution. Files from the cameras can only be downloaded to an authorized computer and only be deleted by the appropriate parties with the proper credentials. As well, internal storage prevents evidence tampering.

Additionally, these body cameras are compatible with most radio models that law enforcement agencies use to replace the remote microphone commonly worn near an officer's shoulder. A covert earpiece allows radio traffic to be monitored discreetly instead of broadcast over the speaker.

LINSTAR Security is a leading provider of government identification solutions that empower agencies to achieve heightened security measures while improving operational efficiency. With our extensive expertise and a broad range of customizable solutions, we cater to the unique identification needs of government entities.

Our comprehensive suite of identification solutions is designed to streamline processes and ensure the utmost security and accuracy in identity verification. We can also provide printers that specialize in driver's licenses, national ID cards, gun permits, passports, employee badges, and more.
